Summary

Backend-focused full-stack developer at Tata Consultancy Services (TCS) with close to 2 years of experience across enterprise and startup projects. Experienced in backend API development, database management, application maintenance, and production support, along with hands-on full-stack bug fixing. Successfully delivered 5+ end-to-end web applications with a focus on performance, reliability, and scalability. Strong in debugging, problem-solving, and working with cross-functional teams.

Skills

Frontend Development: React.js (Proficient), Next.js (Intermediate), HTML5, CSS3, Figma

Backend Development: Node.js (Proficient), Next.js (Intermediate), Express.js

Databases: MongoDB (Proficient), MySQL (Proficient), PostgreSQL (Proficient)

Programming Languages: Java, JavaScript, TypeScript, Python

DevOps & Tools: Docker, Kubernetes, Git, GitHub

Enterprise & Collaboration Tools: ServiceNow, Jira

Work History

Software Developer – Tata Consultancy Services (TCS)
July 2024 – Present

- Engineer and maintain large-scale healthcare enterprise applications for global **clients including Johnson & Johnson, Kenvue, and Stryker.**
- Design and **optimize backend APIs** to streamline complex business workflows and third-party integrations.
- Deploy and support **containerized services** using **Docker** and **Kubernetes** for scalable and reliable application management.
- Ensure 24/7 reliability for high-availability systems by resolving critical full-stack production issues while adhering to strict healthcare compliance standards.

Frontend Developer Intern – MetaShot
July 2023 – Oct 2023

- Developed a production-ready web platform for carbon offsetting solutions using **React.js**.
- Architected reusable UI components, resulting in improved maintainability and a seamless user experience.

Projects

♦ Major Individual Projects

1. Cryptmaster ([Live](#))

Cryptocurrency trading practice platform with virtual coins, real-time graphs, trending coin data, and analysis tools.

Tech Stack: React.js, Node.js, MongoDB, Docker

2. Jobber ([Live](#))

AI-powered resume optimization agent that analyzes resumes against job descriptions, identifies missing ATS keywords, proposes tailored improvements, and generates ATS-friendly resumes after user approval of changes.

Tech Stack: React.js, FastAPI, MongoDB

LLMs & AI Services: OpenRouter, Hugging Face, Groq

Education

1. B.Tech in Computer Science -

Government Engineering College,
Thrissur (7.92 CGPA)

2. Higher Secondary Education -

PKMMHSS Edarikode (95.6%)

Achievements

- Web Master ISTE gect
- Proxy22- Organiser
- ISTE Annual State Convention -
Organiser
- NUEVA - Joint convenor (Web
team)
- Matrix - Convenor
- Summer Startup festival -
convenor (Web team)

♦ Client Project

1. Edges+ ([Live](#))

Carbon offsetting platform promoting environmental sustainability. **Role:** Frontend Developer (client project at MetaShot, with code ownership)

Tech Stack: React.js, Tailwind CSS, Vite, TypeScript, MaterialUI

♦ Team Projects

1. IPfy ([Live](#))

Blockchain-based IP registration system ensures tamper-proof copyright ownership.

Role: Frontend Developer (team project)

2. Tutors App (*to be live*)

Developed a freelancing-style ed-tech platform connecting students and teachers globally through a flexible bidding system. Enabled teachers to post tutoring gigs and students to place bids based on affordability and learning needs.

Role: Frontend Contributor (group project)

♦ Mini Projects

1. Saviour ([Live](#))

Secure storage platform for files, passwords, and text, prioritizing user privacy.

Tech Stack: React.js, Node.js, MongoDB
